

Nick Dirschel

North Attleboro, MA | (508) 463-7879 | nick@dirschn.com | dirschn.com

Summary

Full-stack developer specializing in Ruby on Rails, JavaScript/TypeScript, and React/Next.js. Experienced in API development, cloud infrastructure, and CI/CD automation, with a focus on building secure, scalable web applications that deliver measurable impact.

EXPERIENCE

Parsons Corporation, USA— *Lead Software Engineer*

December 2024 - PRESENT

- Develop a Rails 8 learning management system integrating Next.js course applications with automated TypeScript client generation, milestone-based progress tracking, and role-based dashboards for students and administrators
- Engineer a virtual machine management platform with integrations across AWS, Google Cloud, DigitalOcean, and Vultr
- Architect a secure communications platform with end-to-end automated provisioning of database, messaging server, web infrastructure, SSL/TLS, and firewall hardening using Node.js and React
- Collaborate with cross-functional teams to design and deliver user-centric, intuitive web applications
- Design and integrate scalable, modular, full-stack solutions aligned with business and user needs
- Administer and optimize Linux-based systems for reliable hosting, deployment, and monitoring
- Ensure secure connectivity and data protection through technologies like WireGuard VPN and other privacy-focused protocols

UMass Transit Services, Amherst, MA— *Software Engineer*

November 2021 - PRESENT (Part-time since 2024)

- Maintain and modernize a Rails-based transit operations platform powering employee management, scheduling, vehicle maintenance, and training workflows
- Maintain and modernize a Rails-based parking management system integrating T2 Flex/Iris APIs with SOAP web services, automated entity synchronization across multiple data sources, and role-based access control for parking enforcement and permit administration
- Overhaul test suite for app to increase reliability and reduce bug introduction
- Collaborate directly with operations staff and end users to troubleshoot, triage in-app feedback, and iterate product improvements

EDUCATION

UMass Amherst, Amherst, MA— *BS in Computer Engineering*

September 2016 - May 2020

SKILLS

Languages

Ruby, JavaScript (ES6+), TypeScript, Go, SQL, HTML5, CSS3/SASS, Python, C++, Java

Frameworks & Libraries

Ruby on Rails, React, Next.js, Angular, Vue.js, Bootstrap, jQuery

Tools & Platforms

Docker, Git/GitHub, PostgreSQL, MySQL, Redis, macOS, Bash, Linux

Cloud & DevOps

AWS (EC2, S3), Google Cloud Platform (GCP), DigitalOcean, Vultr, CI/CD, WireGuard VPN

PROJECTS

Maintracker

Full-stack Rails app for vehicle maintenance tracking, including fuel and service history logging

TimeDash

Web app with Rails API and Angular frontend for managing weekly work hours
